Sri Lanka Institute of Information Technology (SLIIT)

Subject: Letter of Validation – Research Project R26-SE-002, "An AI Ecosystem for Fake Job Scam Detection and Fraud-Aware Job Recommendation"

Dear Members of the Research Panel,

I am writing as the external supervisor to confirm that I have reviewed the system developed by research group R26-SE-002 of the Faculty of Computing, SLIIT. The details of the group are given below.

Project Details

Field	Details
Research Group ID	R26-SE-002
Project Title	An AI Ecosystem for Fake Job Scam Detection and Fraud-Aware Job Recommendation
Supervisor	Ms. Karthiga Rajendran
Co-Supervisor	Ms. Thilini Jayalath

Student Name	Student ID
Kajanthan U	IT22224002
Santhosh S	IT22113740
Bandara H M N T	IT22251664
Methmi N P C S	IT22188618

Review

On 3 September 2026, I reviewed the system with the group, with a focus on its commercialization aspect. I asked why a recruiter would choose to join this platform when other job platforms are already available in Sri Lanka.

I also observed that the four components of the system were maintained individually, each on its own separate screens, which did not give a good overall user experience.

Apart from these two main points, I raised several further questions about the system, which the group answered during the review session.

Group's Response

The group explained that existing job platforms in Sri Lanka do not offer a complete interview pipeline within their systems. Recruiters on these platforms usually handle shortlisting, interview scheduling and candidate communication separately through personal email.

The group's system addresses this gap by offering an end-to-end interview pipeline, with the features needed to manage the whole hiring process within a single platform, and a direct connection between job seekers and recruiters, which existing local platforms do not currently provide.

Scanned with CamScanner

To address the user experience concern, the group developed an AI chatbot pipeline. Through it, job seekers can communicate in natural language and connect with all four components from a single conversational interface, instead of moving between separate screens for each component.

After the review, the group worked on the gaps I had identified and has since addressed them in the system, which strengthens the platform's value proposition for recruiters.

Validation

Based on my review and the improvements the group has since made, I am satisfied that the group has identified a clear value proposition for recruiters and has given due consideration to the commercial viability and the overall user experience of the system. I recommend that the group continue to develop and strengthen the commercialization aspect of the project.

I confirm that the observations and comments in this letter are my own professional assessment, based on the review session held on 3 September 2026 and the improvements the group has made since. This review concerns the commercial value and overall user experience of the system and does not, by itself, constitute an independent certification of its technical performance, security or operational readiness.

This letter is issued at the request of the group, for submission to the Research Panel in support of the group's final presentation.

Yours faithfully,

Further, please look at expanding the target market beyond Sri Lanka
